GRADUATE PROGRAMS

A.1. Office of the Dean
Associate Dean of Graduate Studies: John Horn, Ph.D.

A.2. Graduate Council:
University Committee consisting of the Associate Dean of Graduate Studies, each Graduate Program
Director, Director of the MD/Ph.D. program, and one student representative.

A.3. Graduate School Committees
Admissions Committee
Recruitment Committee
Curriculum Committee/Student Evaluation and Progress Committee
Comprehensive Examination Committee
Steering committee

A.4. Graduate Programs
Molecular Genetics and Developmental Biology  Director: Neil Hukriede, Ph.D.
Cell Biology and Molecular Physiology  Director: William Walker, Ph.D.
Cellular and Molecular Pathology  Director: Wendy Mars, Ph.D.
Immunology  Director: Lawrence Kane, Ph.D.
Molecular Pharmacology  Director: Patrick Pagano, Ph.D.
Molecular Virology and Microbiology  Director: Neal DeLuca, Ph.D.

A.5. Biomedical Graduate Student Association (BGSA)
President: Hikmat Daghestani
**B. GRADUATE DEGREE REQUIREMENTS**

**B.1. Requirements for a Ph.D.**

The Interdisciplinary Biomedical Graduate Programs are comprised of formal course work and original laboratory research, which is designed to allow attainment of a Ph.D. in 4-6 years. The University requires students seeking the Ph.D. degree to engage in a minimum of one term of full-time doctoral study that excludes any other employment except as approved by their departments. The Ph.D. degree work must be completed within a period of 10 years from the student’s initial registration for graduate study. If the student has received credit for a master’s degree appropriate to the field of study, then all requirements for the Ph.D. degree must be completed within eight years.

A minimum total of 72 credits is required to satisfy the Ph.D. requirement. Of this, 32 credits must come from approved courses, not including laboratory rotations, Directed Study credits, or Dissertation Research credits.

Students are graded by the A-F letter grading system for most courses. An "I" (incomplete) grade must be made up according to the stipulations of the faculty director of the course, Program Director, and University policy.

It is strongly recommended that graduate students not fluent in English take a University Course in conversational English, to allow active and full participation in the program. This course does not have to be taken for credit and does not contribute to the student's Quality Grade Point Average (QPA).

University policy dictates that the student have a cumulative QPA of at least 3.0 for graduation. The Immunology program requires that students obtain a minimum grade of B in all required courses and in those elective courses counted toward the 32-credit requirement, and maintain a minimum 3.0 QPA. If a student fails to maintain the minimum grade requirement, the Immunology faculty will decide whether to dismiss the student from the program or allow the student to retake any required course for which a grade less than a B was received. Such students will be placed on probation.

**B.2. Requirements for a Master’s Degree.**

Students are not admitted to the Immunology graduate program to attain a M.S. degree. In certain cases, however, it may be necessary that a student in the Ph.D. program be transferred to a terminal M.S. degree. Students pursuing a M.S. degree in Immunology will be required to complete the same course work as described for the Ph.D. program and to prepare and successfully defend a Master’s Thesis.
C. THE FIRST YEAR OF THE INTERDISCIPLINARY BIOMEDICAL GRADUATE PROGRAMS

All students admitted to the Ph.D. program in the School of Medicine join the Interdisciplinary Biomedical Graduate Programs (IBGP). The IBGP committees supervise the first-year curriculum, oversee student research rotations, and evaluate students until they join one of the specialized programs at the end of the first year. The IBGP is designed to facilitate the matching between students and their areas of research interest, and to encourage the timely progression of students through the process of matriculating at the University of Pittsburgh School of Medicine. The activities of the IBGP are governed by the Graduate Council. In addition, there are four subcommittees responsible for directing admissions, recruitment, curriculum and student evaluation and progress (STEP). The key elements of the IBGP are advising and evaluation, curriculum, research, and facilitating the process of transferring into a specialized program. These processes are described briefly below.

C.1. Advising and Evaluation

After students are admitted to the IBGP they are assigned a mentor, one of the individual IBGP Program Directors. The first-year mentor will provide advice on research and academic requirements and choices, as well as assist in the decision regarding entering a specialized program. The mentor also will represent the student’s interests at meetings of the IBGP steering committee should there be concerns about academic progress. The mentor’s role officially terminates when student moves from the IBGP to a specialized program and chooses a thesis advisor.

Students will be continually evaluated by the steering committee with respect to grade point average and grades from research rotations. Students will be assessed based on coursework and laboratory rotations. Successful completion of the first year curriculum allows students to transfer into a specialized program. If a student is not performing at a satisfactory level, remedial action may be suggested, or the student may be dismissed from the program.

C.2. Curriculum

The Foundations of Biomedical Science is the IBGP core course, which is required of all first year IBGP students. It meets for two hours per morning for the first semester, and is supplemented by small group sessions twice a week in the afternoons. This course is designed to provide an overview of the fundamental elements of contemporary biomedical science that should be common to all students, regardless of their interests. Courses in biomedical statistics and in biomedical ethics, offered in the summer at the end of the first year, are also required. Finally, students may elect to take Survival Skills and Ethics for Emerging Scientists. This class meets approximately once per month on a Saturday, and incorporates a discussion of ethics into a series of career development presentations. Students are encouraged to attend all lectures in this course within their first two years in the program.

After the first semester there is considerably more flexibility in the choice of classes. Each program offers one or more classes in the second semester; these classes are generally scheduled in the morning to allow time for laboratory rotation work in the afternoon, and the schedules for the classes generally do not overlap. Students should choose second semester classes based on their own interests and the requirements of the programs they anticipate joining. Consultation with their mentor is required prior to enrolling in classes for the second semester.

In unusual cases, a student’s educational background may preclude the need to take one or more of the courses offered by the IBGP. In this situation, the student should meet with the appropriate course director who may recommend that requirements be waived or that the student take an exam to place out of the course.

If a student fails to achieve a passing grade in any course, make-up exams may be offered. This is entirely at the discretion of the course director, and students concerned about performance in a course should discuss this with the director at the earliest opportunity.

There are a wide range of graduate classes offered by the School of Medicine. The most current list of courses is available from the web site (http://www.gradbiomed.pitt.edu/affairs_curr3.asp).
C.3. Research

Laboratory research is the major component of any biomedical Ph.D. program. The IBGP supervises the process of research rotations during the first year. Students are expected to complete three research rotations during the first year. At the end of each rotation, the student is required to complete a written report prepared according to the style suggested for contributors to the Journal of Biological Chemistry. When the written report is complete, the rotation mentor will review the performance of the student and assign a letter grade for the rotation. In addition, students are required to make an oral presentation of one of their first year rotations as part of their preliminary evaluation. Failure to maintain satisfactory laboratory performance will result in dismissal from the program.

It is generally expected that the three rotations will be performed in different laboratories of members of the IBGP training faculty. This will provide the student with an adequate opportunity to identify an area of research interest and to establish a relationship with a potential dissertation advisor. It is possible for students to take a fourth rotation if necessary. There are several circumstances where the requirement for three rotations or laboratories might be relaxed. For example, if a student has completed a Master’s degree thesis based on original research, a report of this project may be submitted in place of a rotation report. Alternatively, students may want to do a second rotation in the same laboratory if they have already identified a dissertation advisor, or may even want to rotate in a laboratory outside of the IBGP. Requests to modify the rotation requirements should be made, in writing, to the STEP committee.

C.4. Graduate Stipends

Students receive a monthly stipend provided by the School of Medicine for the first year. After that, the Dissertation Advisor is responsible for the stipend. Graduate school tuition is also covered by the School of Medicine and the Advisor.

If you have any questions about the IBGP or any of the procedures described above you should direct them to your mentor or to the Graduate Office, 524 Scaife Hall (648-8957).
D. TRANSFERRING FROM THE IBGP TO THE IMMUNOLOGY PROGRAM

At the end of the first year and after successful completion of the first year curriculum, students may transfer into the Immunology Program. The choice of program is likely to be dictated by the choice of dissertation advisor. The process of moving into a specialized program should occur as follows:

i) Identify a dissertation advisor. This decision is based on rotation experiences, particular research interests, exposure to faculty during classes, and talking with other graduate students.

ii) Receive permission from the advisor to join the laboratory. Most of the training faculty will welcome students into their laboratories. However, certain circumstances may prevent a student from joining the lab of choice. If a laboratory is already full, if there is not sufficient funding available to support an additional student, or if the rotation work was not sufficient, a faculty member may decline to take a student.

iii) Identify the Immunology Program as the desired program. Many of the training faculty have appointments in two programs, so a student may choose the program that best fits his/her interests.

iv) Petition the program director in writing for admission into the Immunology program by submitting the appropriate form obtained from the Graduate Office. The Curriculum Committee will determine whether the student has met the course requirements for the program, and may suggest second year classes to take. First year students should meet with directors of programs in which they are interested near the end of the first semester to determine which classes are recommended for students in the second semester of the first year.

v) The program director informs the Graduate Office in writing of the acceptance of a student into the Immunology training program.
E. THE IMMUNOLOGY GRADUATE TRAINING PROGRAM

E.1. Introduction

The University of Pittsburgh has a long tradition of excellence in immunology, which began with Jonas Salk and the development of the polio vaccine and continues with the development of vaccines for cancer and HIV. The Immunology program faculty includes 40 active members, trained at the most prestigious universities and research institutes. Members' research labs are funded by grants from the National Institutes of Health and many private foundations.

Because immunology intersects so many facets of health and disease, program faculty members have appointments in many departments of the Medical School, including Molecular Genetics and Biochemistry, Pathology, Pharmacology, Medicine, Surgery, Ophthalmology, Dermatology, and Pediatrics. Many program members are also members of the University of Pittsburgh Cancer Institute, the Thomas E. Starzl Transplantation Institute, and other graduate training programs, which strengthens the program’s cohesion and promotes opportunities for cutting-edge research in immunology.

Tumor immunology, transplantation immunology, the immunology of infectious diseases, autoimmunity, and studies of underlying immunologic mechanisms currently form the focus of Immunology program members' research efforts. Many recent clinical breakthroughs have been achieved at the University of Pittsburgh that are directly derived from the research of Immunology program laboratories. These include the development of dendritic cell-based vaccines for the treatment of melanoma, and the treatment of rheumatoid arthritis via gene therapy. Graduate student members in program labs contribute directly to the success of these important projects. Most critically, the research of current and future graduate students will lead to the next generation of immune-based therapies of human disease.

The Immunology program Internet site is: http://www.dean-med.pitt.edu/biomed/immunology/.

E.2. Administrative Structure of the Immunology Program

Program Director: Lawrence Kane, Ph.D.
Assistant Program Director: Lisa Borghesi, Ph.D.
Representative to the Recruitment Committee: Jon Piganelli, Ph.D.
Representative to the Admissions Committee: Adriana Laregina, M.D., Ph.D.
Christine Milcarek, Ph.D.
Curriculum and Evaluations Committee: Christine Milcarek, Ph.D., Chair
Per Basse, M.D., Ph.D.
Lawrence P. Kane, Ph.D.
Binfeng Lu, Ph.D.
Comprehensive Examination Committee: Angus Thomson, Ph.D., D.Sc., Chair
Penelope Morel, M.D.
Russell Salter, Ph.D.
JoAnne Flynn, Ph.D.
Steering Committee: Lawrence Kane, Ph.D., Chair
Lisa Borghesi, Ph.D.
Olivera Finn, Ph.D.
JoAnne Flynn, Ph.D.
Adrianna Larregina, M.D., Ph.D.
Christine Milcarek, Ph.D.
Penelope Morel, M.D.
Karen Norris, Ph.D.
E.3 Responsibilities of Program Representatives listed above

Program Director: The director will oversee the program, administer program activities as needed, serve on the graduate council and interdisciplinary program steering committees, serve as a mentor to assigned first year graduate students, and participate in the evaluation of the incoming class. The director’s term will span a period of five years and is renewable upon subsequent nominations and elections.

Recruitment Committee: The representative will attend regular meetings of the school wide committee, which deals with issues such as increasing the quality of applicants applying to the IBGP Program, competing successfully with other top level graduate programs, and coordinating the poster session for the Annual Recruitment Day.

Admissions Committee: The representative will attend scheduled meetings of the school wide committee, evaluate applicants to the IBGP Program, participate in selection of members of the incoming class, and represent the interests of the Immunology Program.

Curriculum and Evaluations Committee: Members of the committee will meet on a regular basis to evaluate the content and quality of the Program Course Offerings, and annually to evaluate the progress of each student in the Program. The format of this evaluation will be determined by the committee. The chair of the committee will be responsible for scheduling meetings.

Comprehensive Examination Committee: The committee will be responsible for overseeing the Comprehensive Examination required of each student in the latter half of the second year. The Chair will receive proposals from students and convene a committee for each student, as described in more detail in section G of this document. Remaining committee members will participate in the examination process by serving on the committees of individual students.

Steering Committee: Members of the committee will meet frequently to discuss time-sensitive Program issues such as the nomination and election of the Program Director and the processing of faculty membership applications. The chair of the committee will be responsible for scheduling meetings on an as-needed basis.

Student Representative to the BGSA: This individual will represent the Program within the BGSA, and coordinate student-sponsored events as needed.

E.4. Immunology Program Faculty Membership Criteria

1) Graduate Faculty status
2) Extramural research funding: current or recent history
3) Independence: space and funding
4) Experience mentoring graduate students: past and present
5) Appropriateness of research program for immunology graduate student training
6) Participation in the teaching of immunology and/or other graduate students
7) Participation in other immunology graduate program activities: journal clubs, seminar series, graduate thesis committees, examination committees
E.5. Immunology Program Faculty

Simon Barratt-Boyes, B.V.Sc., Ph.D.
Associate Professor
Dendritic cells; Immune response to SIV; vaccine development

Per Basse, M.D., Ph.D.
Associate Professor
Tumor immunology; natural killer cells

Robert Binder, Ph.D.
Assistant Professor
Mechanisms of cross-priming of antigens during immune responses

Lisa Borghesi, Ph.D.
Associate Professor
Transcriptional control of V(D)J recombination, aging and the immune system, NK cell development and function

Lisa H. Butterfield, Ph.D.
Associate Professor
Immunotherapy; tumor antigens

Kelly Stefano Cole, Ph.D.
Associate Professor
Characterization of protective antibody responses to SIV and HIV infection and vaccination

David K. C. Cooper, M.D., Ph.D.
Professor
Tolerance Induction, Xenotransplantation, Islet Cell Transplantation

Michael Murphey-Corb, Ph.D.
Professor
SIV immunobiology; mucosal immunity to viral infections

Toni Darville, M.D.
Professor
Cell Death and Innate Immunity In Chlamydial Genital Infection

Albert B. DeLeo, Ph.D.
Professor
Tumor immunology

Anthony J. Demetris, M.D.
Professor
Transplantation immunology

Rene J. Duquesnoy, Ph.D.
Professor
Transplantation; immunogenetics

Louis D. Falo, Jr., M.D., Ph.D.
Professor
Vaccine design; antigen processing and presentation; tumor immunology; cutaneous immunobiology

Robert L. Ferris, M.D., Ph.D.
Associate Professor
Cancer immunology and immunotherapy; oral immunology
Olivera J. Finn, Ph.D.
Distinguished Professor
Human T cell biology; tumor immunology; transplant immunology

JoAnne L. Flynn, Ph.D.
Professor
Immunology and pathogenesis of Mycobacterium tuberculosis

Sarah Gaffen, Ph.D.
Associate Professor
Defining signal transduction mechanisms and biological function of IL-2 and IL-17 family cytokines, using in vitro and in vivo models

Nick Giannoukakis, Ph.D.
Associate Professor
Gene and Cell Therapy for Type 1 and Type 2 Diabetes Mellitus

Elieser S. Gorelik, M.D., Ph.D.
Professor
Tumor immunology

Robert L. Hendricks, Ph.D.
Professor
Viral immunology; T cell activation and function at inflammatory sites

Raphael Hirsch, M.D.
Professor
Gene therapy for arthritis

Pawel Kalinski, M.D., Ph.D.
Associate Professor
Polarized dendritic cells, tumor immunotherapy

Lawrence P. Kane, Ph.D.
Associate Professor
The role of the Akt kinase in T cell activation

Shabaana Khader, Ph.D.
Assistant Professor
Immunology of infectious diseases

Fadi G. Lakkis, M.D.
Professor
Allorecognition in the innate immune system

Adriana T. Larregina, M.D., Ph.D.
Associate Professor
Skin immunobiology; genetic immunization

Binfeng Lu, Ph.D.
Associate Professor
Th1/Th2 differentiation; T cells in autoimmune diseases

Kyle C. McKenna, Ph.D.
Assistant Professor
Mechanisms of immune evasion
Diana M. Metes, M.D.
Assistant Professor
Immune responses to EBV in immunosuppressed patients

Christine A. Milcarek, Ph.D.
Professor
Immunoglobulin gene expression and immunological memory

Ronald Montelaro, Ph.D.
Professor
HIV-1 and animal lentivirus antigenic variation; immune enhancement; AIDS vaccine development

Penelope A. Morel, M.D.
Professor
Th1/Th2 regulation; autoimmunity and dendritic cells; human NK cell biology

Adrian E. Morelli, M.D., Ph.D.
Associate Professor
Role of dendritic cells in peripheral tolerance and transplantation

Sidney Morris, Ph.D.
Professor
Inflammation; macrophage activation; cytokine signaling; regulation of gene expression

Gerard Nau, M.D, Ph.D.
Assistant Professor
Host-pathogen interactions, bacterial pathogenesis, genomic approaches to gene expression analysis, immunotherapeutics.

Karen A. Norris, Ph.D.
Professor
Immune evasion mechanisms of microbial pathogens

Hideho Okada, M.D., Ph.D.
Associate Professor
Analyses of immunological environment in the brain and brain tumors; immunological therapy for brain tumors; gene therapy for brain tumors; roles of microRNAs in brain tumors and immunity.

Jon D. Piganelli, Ph.D.
Assistant Professor
Models of autoimmune diabetes

Bruce S. Rabin, M.D., Ph.D.
Professor
Immunopathology; psychoneuroimmunology

Hannah Rabinowich, Ph.D.
Associate Professor
Regulation of apoptosis in T lymphocytes; tumor immunity

Anuradha Ray, Ph.D.
Professor
Th subsets, immunology of lung

Prabir Ray, Ph.D.
Professor
Immunology of lung, role of AKT in immune function
Todd A. Reinhart, Sc.D.
Associate Professor
HIV and SIV molecular pathogenesis

William M. Ridgway, M.D.
Associate Professor
Regulation of T cell activation; autoimmunity

Paul D. Robbins, Ph.D.
Professor
Gene therapy approaches for the treatment of autoimmune diseases

Ted M. Ross, Ph.D.
Professor
DNA vaccines for HIV-1 and other infectious agents

Russell D. Salter, Ph.D.
Professor
Antigen presentation in dendritic cells; autoimmunity

Saumendra Sarkar, Ph.D.
Associate Professor
Innate Immunity; signaling process involved in cytokine production after virus infection; develop modulators for signaling pathways

Michael R. Shurin, M.D., Ph.D.
Associate Professor
Tumor immunology; dendritic cell biology

Walter J. Storkus, Ph.D.
Professor
Natural killer cell and cytolytic T lymphocyte antitumor targeting mechanisms

Angus W. Thomson, Ph.D, D.Sc.
Professor
Transplantation tolerance; dendritic cell function

Massimo Trucco, M.D.
Professor
Genetics of diabetes; autoimmunity

Abbe N. Vallejo, Ph.D.
Associate Professor
Autoimmunity and tolerance; biology of inflammation and tissue repair

Nikola Vujanovic, M.D., Ph.D.
Associate Professor
Immune response to head and neck cancer; natural killer cell biology

Theresa Whiteside, Ph.D.
Professor
Tumor immunology

Zhaoyang You, Ph.D.
Assistant Professor
In Vivo Targeted Vaccines for Tumor Immunotherapy
Hassane M. Zarour, M.D.
Associate Professor
MHC Class II tumor epitopes

Adriana Zeevi, Ph.D.
Professor
Transplantation; immunogenetics

E.6. Immunology Program Students

Students interested in the Immunology Program will typically take Comprehensive Immunology and Experimental Basis of Immunology in the Spring semester of their first year, along with one or two elective courses. In the Fall semester of their second year, Immunology students will begin taking Contemporary Topics in Immunology (which they will take for two to three years, depending on their course credit requirements) and may take an elective course(s) as needed or desired. In the Fall semester of their second year, Immunology students will take Immunology and Human Disease, and may take an elective course(s) as needed or desired. Students who do not take Immunology program courses in their first year can still join the Immunology program; they will take the above sequence of courses beginning in the Spring semester of their second year, and will therefore complete their electives before their required courses in most cases. MD/PhD students will be given credit for the Foundations of Biomedical Science lecture course.

F2. Immunology Program Course Requirements—MD/PhD Track

Admission into the PhD program in Immunology to medical students who wish to pursue the degree is subject to prior approval by the Director of Graduate Studies in Immunology and the thesis mentor who is a member of the graduate faculty in the Immunology program. This will apply to students who matriculate directly into the combined MD/PhD Program (MSTP) and also to medical students who apply to join the MSTP during or after year 1 or year 2 of medical school.

As per University of Pittsburgh guidelines, a minimum of 72 credits is required for the PhD in Immunology over a minimum of 6 full-time terms. 9 to 14 credits constitute full-time study in the fall and spring terms and 3 credits is considered full-time for the summer term. A minimum of 32 of those credits will come from coursework while a minimum of 40 credits must be earned for dissertation research, acquired after passing the doctoral comprehensive examination.
For MD/PhD students, 16 credits are granted toward the coursework successfully completed during the first 2 years of medical school at the University of Pittsburgh. A minimum of 17 credits of remaining coursework will be constituted by the following courses:

<td>2 (or more)</td>
</tr>
</tbody>
</table>

*Electives may include the Molecular Medicine course, the Professional Development course, and/or non-required courses offered by medical school graduate programs

Students will be subject to maintaining the same GPA requirements and ethical standards as are applied to graduate students as described in the Graduate Student and the MD/PhD program Handbooks. Comprehensive exams may be taken as early as the end of the first year in residence in the Immunology Graduate program, typically after most formal course work is completed.

F3. Immunology Program Course Descriptions

**MSIMM 2210 Comprehensive Immunology**
(2.0 Cr)
This is a second-tier lecture and discussion course that will introduce the students to the fundamental concepts of modern immunology. The course will cover cells, tissues and organs of the immune system. Furthermore, in depth analyses of the development, activation, effector functions, and regulation of immune response will be presented in this course.

**MSIMM 2230 Experimental Basis of Immunology**
(2.0 Cr)
This is a second-tier course that will expose the students to classical and contemporary literature in modern immunology. Emphasis will be on paper analysis and critical evaluation of primary data. This course will parallel the topics presented in Comprehensive Immunology lecture course, which must be taken before or simultaneously with Experimental Basis of Immunology.

**MSIMM 2240 Intro to Immunobiotherapeutics**
(2.0 Cr)
This course provides a comprehensive overview of the principles and the technology upon which immunobiotherapeutics are based. The course focuses on the overall aims of using small molecules, antibodies, genes and cells as immunotherapeutic agents. It covers the use of viral and non-viral agents as gene delivery vehicles, cells as therapeutic agents and small molecules as delivery and therapeutic vehicles. The course also covers diseases and disorders in which immunobiotherapy has proven safety and demonstrated successful outcomes.
like cancer, mendelian disorders and autoimmunity. Lectures and student presentations cover: Genes and cells as
drugs, peptides, antibodies and small molecules as therapeutics and delivery vehicles, viral and non-viral vectors,
stem cells, and specific diseases where immunotherapy has shown safety and efficacy. Students may also be
educated on bioethical issues and existing laws governing biotechnology and molecular medicine approaches.

MSIMM 2250  **Immunology Teaching Assistant**  (1.0 Cr)
Microbiology Course
The purpose of this course is to introduce graduate students of the Integrated Biomedical Sciences Graduate
Program to the principles of teaching. The students will be trained in basic teaching techniques as well as provided
material for teaching students specific concepts. As part of this course, students will participate in teaching first-year
medical students the fundamentals of microbiology, in conjunction with the Laboratory and Problem Based
Learning sections of the Molecular Pathogenesis of Infectious Disease course of Basic Science Medical School
block. Each student will be responsible for 8-10 medical students in a laboratory setting. The student will present
basic laboratory techniques, explain concepts of microbiology and infectious disease, including diagnostic tests,
interpretation of results, and data management. In addition, the student will assist the Faculty Facilitator in the
Problem Based Learning Sessions where they will review laboratory findings with the students.

Undergraduate Immunology Course
This course will provide Immunology graduate students with the opportunity to serve as teaching assistants in the
undergraduate Immunology course. The curriculum is designed to provide valuable teaching skills to the
professional scientist. Students will attend all BIOSC 1760 lectures, prepare problem sets and session content for
recitation periods, conduct a one-hour recitation period each week, assist with the preparation and grading of exams,
and proctor exams.

MSIMM 3220  **Contemporary Topics in Immunology**  (1.0 Cr)
This is a third-tier course in which students will read, present, and evaluate the primary literature in immunology.
Each semester will feature an integrated set of papers addressing a current issue of interest to modern immunologists. The course may be taken more than once, since the topic addressed will change each semester. The prerequisite is Comprehensive Immunology or permission of the course director.

MSIMM 3230  **Immunology and Human Disease**  (2.0 Cr)
This is a third-tier course that will apply modern immunological principles to develop our understanding of the
causes or treatments of human disease. The course will consist of a series of lecture and discussion blocks.
Background reading will be required and the course will rely heavily on the reading of original articles. Classes
will regularly be devoted to paper discussions, and each student will be responsible for introducing one paper. The prerequisite is Comprehensive Immunology or permission of the course director.

MSIMM 3240  **Graduate Student Writing Seminar**  (1.0 Cr)
This course teaches fundamental grant writing skills using actual NIH training grant submissions. Students
construct a competitive research training grant and are instructed on methods to identify funding sources. This
course consists of introductory lectures followed by a series of workshops staffed by the Immunology Training
Faculty. Workshops cover peer scientific review and study section operation, avoidance of common pitfalls in grant
writing, grant writing ethics and scientific community service.

Additional Immunology program courses can and will be developed, as dictated by student and faculty interests and
needs.

Fall 2004
Combined with Immunology Journal Club
Course director: Dr. Lawrence Kane
F.4. Publication Requirement

Publication of novel findings is an important part of being a research scientist and the principal way that scientific findings are disseminated. Students are therefore required to publish at least one first-author paper of original research, for completion of the Ph.D. in Immunology. Exceptions to this requirement must be approved by the thesis committee.

F.5. Additional Immunology Program Activities

The Immunology Journal Club benefits from graduate student, post-doctoral fellow, and faculty participation. This weekly meeting, in which participants discuss the background, data, interpretation, and relevance of selected current journal articles, allows students to develop essential critical reading habits as well as presentation and group leadership skills. In addition, students make important contacts with faculty and post-doctoral fellows from other program labs and disciplines. For second and third year graduate students, participation in the journal club is mandatory to fulfill the requirement for the Contemporary Topics in Immunology course (MSIMM 3220).

The weekly Immunology Seminar series, co-sponsored by the UPCI, allows graduate students, post-doctoral fellows, faculty, and guest speakers to present their most exciting current research results. Graduate students are required to present their research progress once per year beginning in the third year (second year in the Immunology Program). Graduate students meet with guest speakers at special lunches, so that the students can begin to form contacts for collaborations and future post-doctoral opportunities. Attendance each week is required for all Graduate Students. Attendance at the weekly presentations is required of all graduate students in the Program.
G. IMMUNOLOGY PROGRAM COMPREHENSIVE EXAMINATION

G.1. Introduction

Students enrolled in the Ph.D. program should take the Comprehensive Examination within one year of completing their first year curriculum requirements. The Comprehensive Examination will be administered after the student has completed most course work and has chosen a major advisor. Early in the Spring semester in which proposals are to be submitted, students will meet with the chairperson of the Examination Committee to discuss these guidelines.

The student will be required to submit a proposal in the format of a research grant to the Comprehensive Examination Committee chairperson, who shall establish a panel of faculty members to evaluate each student's proposal and to conduct an oral examination of the student if the written proposal is acceptable. The student is graded pass/fail, with a simple majority vote of the panel deciding the grade. In the event of a failure, the student shall be given one opportunity to retake each failed component of the examination. In the event that a student fails either component twice, the action of the faculty shall be dismissal of the student from the program or recommendation of a plan for completion of a terminal M.S. degree.

G.2. Comprehensive Examination Proposal (written component)

The Comprehensive Examination is based on the student's thesis research area (see below). Unless an exception is granted, the student must submit an Abstract describing the planned research project by May 1, and the full written proposal by June 1. Preparation of the written documents should follow the guidelines below and can be further clarified by the Chair of the Comprehensive Examination committee if required. The examination will require that the student submit and defend a proposal in the format of a research grant, with the following guidelines:

a. General Guidelines. The proposal is expected to be conceptually well-founded and adequately documented. The student is responsible for preparing an original research proposal. Dissertation advisors and others may be consulted on specific scientific issues, but the document must be prepared exclusively by the student. Advisors may not discuss the proposal with the student, or edit the written proposal for style or content, or coach the student for the oral defense. Attribution to published and unpublished sources must be comprehensive. The written proposal must be original to the student, although the project may have been outlined previously in the advisor's grant. The written proposal must include well-defined hypotheses and rationale, as well as the significance of the proposed experiments. Overall significance to the field of research also should be discussed.

b. Format. The proposal shall be single spaced, with one-inch margins on all sides. The font used shall be 11 pt. Arial, although smaller type may be used in figures and legends. The written research proposal must adhere to the following page guidelines:

- Title Page
- Abstract (1-2 paragraphs)
- Specific Aims: not to exceed one page
- Background and Significance: not to exceed two pages
- Preliminary Data (optional): not to exceed three pages
- Research Plan: not to exceed four pages
- Tables, figures and other data (optional): not to exceed four pages.
- Literature Cited: not to exceed four pages; must include complete citation with all authors, year, title, journal, volume, inclusive pages (see e.g. Journal of Experimental Medicine).

c. Policy on consultation. Students are encouraged to seek feedback on the written proposal from other students, but not faculty members. Those whose written English skills are considered weak may wish to consult the Writing Center in the Cathedral of Learning (ext. 46556), which provides individualized help with writing skills.

G.3. Administration of the Comprehensive Examination

a. Submission of the proposal. Students shall take no more than four weeks from their laboratory work in the writing of their Comprehensive Examination proposal. Upon completion, an electronic (PDF only) copy shall be submitted to the chairperson of the Examination Committee. An electronic copy of the Specific Aims of the Advisor's grant(s) on the specific area should also be submitted at the same time.
b. **Examination committee.** As soon as possible (PREFERABLY WITHIN ONE WEEK OF SUBMISSION OF THE PROPOSAL), the Examination Committee, with the advice of appropriate faculty members, shall establish for each student's proposal, a panel of faculty members (and its chairperson) competent to evaluate the subject of the research proposal. Each panel shall consist of three members, at least two of whom are members of the Immunology Program. At least two members of the panel will have served previously on a comprehensive examination panel. The chairperson of the Examination Committee will distribute the proposal to members of the selected panel within one week of its submission. The student's thesis Advisor shall not serve on a panel established to evaluate one of his/her students.

c. **Evaluation of the proposal.** The written proposal should be assessed mainly for clarity, scientific accuracy and internal consistency. The proposal should not be evaluated like an R01 proposal, i.e. significance and innovation should be given less weight than the above criteria (although the student should still be able to explain the significance and novelty).

i. **Comments.** Committee members should forward to the Chair of the committee specific written comments on the proposal within two weeks of receipt, including a recommendation on which level of revision (if any) is necessary (see ii – below). The Chair will compile these comments and forward them to the student, along with a decision on the written document.

ii. **Initial assessment.** Three initial outcomes are possible: provisional pass (small factual or stylistic comments, which can be quickly revised), minor revision (e.g. one sub-Aim in need of significant revision) or major revision (seriously flawed hypothesis and/or approach). The student will submit a revised proposal, including a brief response (one-page limit) to the original critiques within 2 weeks (provisional pass), 4 weeks (minor revision) or 6 weeks (major).

iii. **Pass/Fail.** The Committee will reach a decision about the suitability of the revised proposal (i.e. responsiveness to the critiques) within **one week.** If the revised document is still judged to be inadequate, the student will be judged to have failed the written component. A second unacceptable written exam performance shall constitute a second failure, and the student will be subject to dismissal or other action as noted in section 1, above.

d. **Oral examination.**

i. **Logistics.** The oral examination for each student should be scheduled within three weeks after submission of a sufficient written proposal. At the beginning (in the absence of the student) the Examination Committee chairperson (or a representative) will briefly address the committee, communicating the ground rules for the examination. The oral examination will be held in a closed session, with only the student and three members of the examination panel in attendance. The student will begin the examination with an oral presentation (not to exceed 15 minutes). Slides depicting Specific Aims or figures/tables from within the proposal may be used. The oral examination shall not exceed two hours, inclusive of the student's opening presentation. The research proposal shall be the sole document available to the student during the oral examination.

ii. **Standards.** It will be the panel's task to evaluate the student's understanding of both the contents of the research proposal, and the basic concepts underlying them. The oral examination should not be used as an opportunity to correct serious flaws with the written proposal. At the end of the oral examination, the panel will vote in private to pass/fail the student. A simple majority shall prevail. There shall be no conditional pass/fail decision. The panel chair will immediately notify the student of the decision and evaluation of performance. A critique written by the comprehensive examination panel chairperson, evaluating the exam performance and the pass/fail decision, shall be submitted to the chairperson of the Examination Committee, who shall distribute copies to the Director of the Immunology Graduate Program, the student, and the student's Advisor.

iii. **Failure/re-examination.** In the event of failure of the oral exam, a student will have one opportunity to re-take that component of the exam, and will be advised by the exam committee whether it would be appropriate to revise the written component (only if no previous revision was required prior to the first oral exam) before re-taking the oral component. The re-examination committee will consist of three faculty, at least two of whom will be from the Immunology Program. The committee should consist of one original committee member and two replacement members, at the discretion of the Program Director. A second unacceptable oral exam shall constitute a second failure, with the student subject to dismissal or other action as noted in section 1, above.

h. A "pass" of the comprehensive examination shall be accomplished when both of the following conditions are met:
(i) the written proposal is considered sufficient as presented, and (ii) the student has performed knowledgeably in the oral defense of the proposal.

H. ADVANCEMENT TO CANDIDACY AND FORMATION OF A DISSERTATION COMMITTEE

Following completion of course work and passing the comprehensive examination, the student undertakes the steps required for advancement to candidacy for the Ph.D. degree, outlined below.

Students should form a dissertation committee within one month of passing their Comprehensive Examination. The committee shall consist of at least five faculty members. The Dissertation Advisor is included in the committee and may act as Chair, although another faculty member may be designated Chair of the committee. The majority of the members must be from the Immunology program faculty, and the majority of the members must have Graduate Faculty status. At least one member must not be a member of the Immunology program, and at least one of these outside members must have Graduate Faculty status. The student is not limited to faculty from the School of Medicine. The Director of the Immunology program will review the committee, sign the necessary forms and forward the completed documents to the Graduate Office and to the Immunology Program Administrator. Final approval of committee membership rests in the hands of the Associate Dean for Graduate Studies.

The thesis committee should meet within two months of formation. Prior to the meeting, a written thesis proposal should be provided to each committee member. At this meeting, the dissertation research project is presented in detail to the committee; if the committee approves the proposal, the student should make certain that all required graduate school forms are completed for advancement to candidacy for the Ph.D. degree.

Every time a thesis committee meets (including the first meeting), a brief report of this meeting, signed by both student and advisor, must be sent to all thesis committee members, and to the Immunology Program Administrator, so that this information can be included in the student’s academic file.

Following the initial thesis committee meeting, additional meetings must be held at six month intervals. The student must submit one week prior to the scheduled committee meeting a brief written summary of their research progress since the previous committee meeting.

I. DISSERTATION AND FINAL ORAL EXAMINATION

When a determination has been made by the thesis committee that the student is nearing completion of their degree, the committee may give the student permission to begin working on their written dissertation. This generally occurs about six months from the anticipated graduation date. As the student approaches this date, and is ready to schedule their oral defense (see below), they will complete a form, to be signed by the thesis advisor and Program Director, indicating that they have met all other requirements for the Ph.D., apart from the oral defense. This includes the necessary coursework and publication (or acceptance) of at least one peer-reviewed manuscript of original research (see F.4). This form is to be presented to the Office of Graduate Studies when arranging a date for the oral defense. Copies of the form are to be retained by the student, thesis advisor, Program Director and Office of Graduate Studies.

The student's dissertation must provide evidence of original scholarly research of sufficient quality to be published in a leading scientific journal. Laboratory work for which a student receives wages (for example, work performed when the student was employed as a technician) is not eligible for any part of the dissertation research. The student's dissertation committee will meet at the time that the student's research is nearly complete and will authorize the student to begin writing the dissertation. The style and format of the dissertation must conform to the standards set forth by the Graduate Council. The dissertation advisor and one or more members of the dissertation committee will read preliminary drafts of the dissertation and will approve the final copy for submission to the dissertation committee. The final copy must be submitted to the dissertation committee at least two weeks prior to the dissertation defense date.

The dissertation defense consists of a formal, public seminar on the subject of the dissertation. This is followed by
an examination of the student by the Thesis Committee members. If the decision of the committee is not unanimous, the case is referred to the Dean for resolution. The degree, in Immunology, will be granted by the School of Medicine.

A student must be on active status (must be registered for a minimum of three credits during a 12 month period) and must register for at least one credit during the term in which they are graduated. Students who complete all the degree requirements in one term but are graduated the next term may petition the dean for a waiver of this requirement. A student who is on inactive status must be readmitted and registered for three credits in order to be graduated.

The School of Medicine stipulates that the following requirements must be met before the last day of the term in which the student has applied for graduation. Students apply for graduation through the Graduate Studies Office.

At least one month prior to defense, the student must make arrangements with the Immunology program Administrator for the final defense. This information will be relayed to the Office of Graduate Studies in letter form, stating the student's name, program, degree sought, title of dissertation, date, time and place. This information will be forwarded to the University Times for publication and an announcement will be sent to the Graduate Faculty Members of the School of Medicine.

After the final defense, the following should be delivered to the Graduate Office as one package:

One copy of the final approved dissertation (unbound, final corrected version on acid-free paper), with title page signed by all thesis committee members.

Three additional copies of the abstract (350 word maximum double-spaced), initialed in the upper right hand corner by the student's advisor.

A letter from the Program Director giving official notice that the candidate has fulfilled all the academic requirements (change of status and grade cards should accompany this letter).

Forms required:

Survey of Earned Doctorate (used by National Research Council)

Agreement form to permit publication of the dissertation by University Microfilms, Inc.

An official receipt from University Cashier (G-7 Thackeray Hall) for payment of dissertation binding/microfilming fees.

Please also note that students are required to submit an electronic version of the thesis using the ETD submission process (http://www.pitt.edu/AFShome/g/r/graduate/public/html/etd/) as required by University Policy.
